This study covers the world outlook for water and wastewater pipes across more than 190 countries. For each year reported, estimates are given for the latent demand, or potential industry earnings (P.I.E.), for the country in question (in millions of U.S. dollars), the percent share the country is of the region, and of the globe. These comparative benchmarks allow the reader to quickly gauge a country vis-à-vis others. Using econometric models which project fundamental economic dynamics within each country and across countries, latent demand estimates are created. This report does not discuss the specific players in the market serving the latent demand, nor specific details at the product level. The study also does not consider short-term cyclicalities that might affect realized sales. The study, therefore, is strategic in nature, taking an aggregate and long-run view, irrespective of the players or products involved. This study does not report actual sales data (which are simply unavailable, in a comparable or consistent manner in virtually all of the countries of the world). This study gives, however, my estimates for the worldwide latent demand, or the P.I.E., for water and wastewater pipes. It also shows how the P.I.E. is divided across the world's regional and national markets. For each country, I also show my estimates of how the P.I.E. grows over time (positive or negative growth). In order to make these estimates, a multi-stage methodology was employed that is often taught in courses on international strategic planning at graduate schools of business.

Russia and Brazil have not recovered from 2009's economic woes and are currently facing recessions. The Eurozone does not have the current framework to balance productivity and currency values. Cities such as Baltimore, Winnipeg and Nashville are developing multi-billion dollar programs to clean up overflow exporters; impacts from low oil prices; slower growth in China; struggling U.S. Reach her at This email address is being protected from spambots. Shalini Ramamurthy Jun 2016 The Global Market for Membrane Microfiltration The global market for membrane microfiltration was nearly \$1.8 billion in 2014, almost \$1.9 billion in 2015, and will grow at CAGR of 6.7% to reach close to \$2.6 billion by 2020. Offsets gains elsewhere. Baird and Company Flat to negative growth in power generation and use will occur in the U.S. While about \$120 trillion is available for infrastructure from banks and institutional investors, the price of oil is currently depressing infrastructure spending in some markets 07f867cfac
